PROFESSIONAL SUMMARY

AI Engineer and software engineer with 8+ years of combined experience in digital forensics, OSINT, threat intelligence, Cyber Fraud Investigation, AML Investigation, AI tools development and full-stack web development. Proven ability to bridge technical investigation and software engineering from evidence acquisition and cybercrime analysis to building internal tools that streamline case and data management. Adept at working across law enforcement and private-sector technology environments.

PROFESSIONAL EXPERIENCE

AI Engineer | Remote Freelancer

Pakistan

March 2026 – Currently Working

Inspector Cybercrime / Digital Forensic Investigator | FIA Cyber Crime Wing / NCCIA | Pakistan

December 2019 – Feb 2026

- Worked on cybercrime cases involving online Electronic fraud, AML, cryptocurrency scams, identity theft, ATM Fraud, WhatsApp Hacking Fraud, Bank hacking Fraud and illegal access to computer systems.
- Handled the complete process of digital investigations, from collecting and preserving evidence to maintaining proper chain of custody, conducting open-source research, and examining systems that had been compromised.
- Led the Digital Forensic Lab as its Incharge, where the primary responsibility was to examine and analyze digital evidence recovered from devices. Used professional forensic tools such as Cellebrite UFED, MOBILedit Forensic, Forensic Toolkit (FTK), and Oxygen Forensic Detective to process evidence and produce formal forensic reports that supported cybercrime cases and legal proceedings.
- Designed and built a desktop tool using Python that helps forensic investigators go through large numbers of images and documents quickly. The tool can identify a specific person in photos, flag inappropriate / explicit content, detect intimate scenes, and search for specific words inside PDF files, Word documents, PowerPoint presentations, and images. This tool was put into active use in the forensic lab to speed up evidence review and help investigators find relevant material during criminal cases.

Software Engineer / Web Developer | WHIZPOOL | Islamabad, Pakistan

May 2018 – December 2019

- Developed websites ranging from simple static pages to fully dynamic web applications, handling both front-end and back-end development across multiple client projects while focusing on performance and user experience.
- Designed and developed REST APIs for web and mobile applications to ensure reliable communication and efficient data exchange between user interfaces and server systems.
- Worked with databases such as MySQL, MongoDB, and Cassandra to store and manage application data, including handling real-time data for chat and messaging features.

- Integrated third-party services such as payment gateways for secure transactions, social media authentication, and messaging platforms like Twilio to support notifications and communication features in applications.
- Implemented secure user authentication using JWT along with login options through Google and other social platforms.
- Used Python to collect and organize large amounts of online data through web scraping for business and analytical needs.
- Worked with several technologies depending on project requirements, including PHP (Laravel), Node.js with Express, AngularJS for front-end development, and Python frameworks such as Flask and FastAPI.
- Delivered full-scale websites and web applications from development to deployment across a variety of client projects.

Associate MIS | VTT Global | Islamabad, Pakistan

March 2018 – May 2018

- Worked with large datasets collected through surveys across multiple projects, preparing and organizing the data for use by the research team.
- Cleaned and structured raw survey data using Python to improve accuracy and ensure it was ready for analysis.
- Developed web-based dashboards using PHP (Laravel) to manage, view, and monitor large datasets with graphical reports and visual summaries.
- Stored and managed collected data in databases, ensuring it was organized and easily accessible for reporting and research purposes.

Junior Web Developer (MT) | SyntecX Solutions | Islamabad, Pakistan

June 2017 – March 2018

- Developed and improved features in company SaaS products, mainly working on CRUD operations using PHP, Angular, and JavaScript.
- Built and updated APIs to support communication between internal systems and other connected applications.
- Fixed software issues and bugs reported by the support team, helping maintain system stability and improve product quality.

TECHNICAL SKILLS

- **Programming Languages:** Python, PHP, JavaScript
- **Frameworks & Technologies:** Laravel, Flask, Node.js, FastAPI
- **Databases:** MySQL, MongoDB
- **Tools & Technologies:** Apache Kafka, Docker
- **AI:** Gen AI, RAG, Vector Database, N8n

EDUCATION

Bachelor of Science in Computer Science | CGPA: 3.39/4 (84.7%)

COMSATS University Islamabad – Attock Campus, Pakistan | *February 2013 – January 2017*

LANGUAGES

English (Professional), Urdu (Native)
